

Continue

While Google may be trying to build a password-free future, the present current forces us to make a new account and new password for almost every single website we use. From our most secure banking apps to some frivolous web game we use to kill time between meetings, everything has a password and an email/username that we need to keep track of. While most of the best password managers are paid and add features like VPNs, 2FA token keeping, and identity monitoring, you don't really need most of that stuff. For most of us — myself included — we just need somewhere to easily dig out passwords when logging into our apps and websites, and Google Password Manager does that perfectly for free on Android and Chrome. Here's how to use Google Password Manager on both of these platforms to enter, modify, or delete your passwords. How to use Google Password Manager on Android Open an app or website you wish to log in to. Tap the username field. If a "Continue with account" pop-up appears, tap Continue. If a drop-down menu appears, tap your username or the key symbol above the keyboard. Source: Android Central Tap the credentials you wish to input. Repeat steps 2-4 with the password if it doesn't automatically populate. Tap Sign in. Source: Android Central If the autofill option doesn't turn on, you may need to activate Google Autofill first. How to add passwords to Google Password Manager on Android Open an app or website you wish to sign up for. Enter the username or email you wish to use. For the password, tap the key above the keyboard. Tap Suggest strong password. Tap Use password. Tap Sign up. Source: Android Central How to activate or manage Google Password Manager on Android Open the Settings app. Tap the search bar. Type in "Autofill". Tap Autofill service to go to its menu. Tap Autofill service. Source: Android Central Tap the settings gear. Tap the toggle to turn on Autofill with Google (and Google Password Manager). Tap Passwords to modify or delete current passwords. Source: Android Central Tap the app or website you want to modify the password for. Enter your password, PIN or fingerprint to verify your identity. Tap Edit or Delete. Tap Save or Confirm upon finishing your edit. Source: Android Central You can also tap Check passwords to quickly audit and change outdated or exposed passwords, which is even easier now that Google's adding the ability for the Google Password Manager to fix your passwords in a single tap. How to use Google Password Manager on Chrome Open the login page for one of your saved websites. Tap the username field. Tap your username from the drop-down menu. Source: Android Central (Image credit: Source: Android Central) Repeat steps 2-3 if your password doesn't auto-populate. Tap Log In. Source: Android Central (Image credit: Source: Android Central) How to add passwords to Google Password Manager on Chrome Open the login page for a website you want to save. Enter your username. Source: Android Central (Image credit: Source: Android Central) Enter your password. Tap the key icon in the address bar. Source: Android Central (Image credit: Source: Android Central) Source: Android Central (Image credit: Source: Android Central) How to manage Google Password Manager on Chrome Source: Android Central (Image credit: Source: Android Central) Source: Android Central (Image credit: Source: Android Central) Enter your Google account password to verify your identity. Update your password or username as desired. Tap Save. Source: Android Central (Image credit: Source: Android Central) Given how easy it is to add and modify credentials on Google Password Manager across your devices, there's nothing to stop you from getting started with it right now. However, if you're tired of forgetting passwords, give Google's manager a try and keep them as protected as the rest of your Google account data! many of us want to use Android phone as a modem for computer but due to some reason we cant. android offers this function. requirements -1. USB cable2. android phone3. Laptop or computer with usb slot4. android phones driver1. open settings in android phone. 3. select tethering and hotspots4. tick the USB tethering option. (make sure your Android phone is connected to computer through USB)5. click on network tab in task bar, after some time it will start internet check by using mozilla or any browser. TechRadar Verdict Even if you only download files occasionally, it's worth having Free Download Manager on your PC or Mac. Unlike many download accelerators, it's completely free and won't limit the number of files you can download or throttle speeds. TODAY'S BEST DEALS +Completely free - no ads or limitations+Handy bandwidth management tools+One-click downloading of torrents Downloading files from the internet has always been a fairly painful experience, and even today slow servers and network congestion can make downloading big files a real pain. That's why you need a dedicated download manager, and the unimaginatively-named Free Download Manager is an excellent tool for the task. Free Download Manager enables you to download same file from multiple sources, which means that if one particular server is slow, it can change to the fastest available one instead. It's worth noting Free Download Manager's interesting history: it was originally proprietary software, and was later released under the GNU General Public License (though source code for versions 5 and later isn't available). As such, you have to be careful where you download it - the link we've provided here is to the original vendor, but other distributors are free to bundle it with potentially unwanted programs that could really spoil your day. User experience You can either drag torrent files into Free Download Manager, or copy the URL of a file and click the plus icon to begin saving it. It really is as straightforward as that. All current and completed file downloads are clearly visible with a thumbnail image, the current speed and a progress bar in a searchable list, making it easy to find the file you want. You can download all kinds of files this way, including YouTube videos (provided you have permission from the copyright holder, of course). Once you've pasted a video URL, you'll be prompted to choose a file name, format, and quality. Then just start downloading. With Free Download Manager, there's no need for a separate tool for ripping or converting clips from YouTube. You can adjust how much traffic downloads are accounting for, set priorities for torrents and drag and drop URLs from web browsers, and there are extensions for Chrome, Firefox, Edge, Internet Explorer and Safari. There's also a handy Snail Mode for getting files at slow speeds without closing connections - very useful if you have other work to be getting on with online. Free Download Manager very straightforward and user-friendly, but if you run into any difficulty the project's forums are an excellent resource. You can also share your ideas for new features here, and report bugs in need of a good squishing. Provided you get it from the original source, Free Download Manager is a superb tool for taking the hassle out of downloads and improving speeds. You might also like TODAY'S BEST DEALS Android updates its operating system regularly to include new features, fix glitches, and make your Android device run more smoothly. The newest version is Android 10, and it offers some great features you'll want to get your hands on. Installing the new OS is not too difficult. Before you install it, you have to make sure your phone is compatible with it and able to receive the latest update, which we can help you with. Then, we'll give you some advice about getting the update. Make sure you have the right phone Julian Chokkattu/Digital Trends Unfortunately, not every Android phone is going to be eligible for the Android 10 update. If your device is over 2 years old, has already received two major Android OS updates, or is a lower-end budget device, you might not be seeing Android 10 at all. We've collected rumors for each of the manufacturers in our Android 10 updates post, so you can check there for the latest news on a variety of devices. However, there are some devices which are a given. All of Google's Pixel phones have already received the update, while the latest flagship phones — like the Samsung Galaxy Note 10 range and Huawei's P30 range — are also highly likely to get the update. You can also safely assume any phone that took part in the Android 10 beta is likely to receive the update. The Android 10 beta program was the largest in Android's history, with an amazing 25 devices from 13 manufacturers taking part. Here's the list of phones that supported the Android 10 beta: Asus ZenFone 5Z Essential Phone Huawei Mate 20 Pro LG G8 ThinQ Nokia 8.1 OnePlus 7 Pro OnePlus 7 OnePlus 6T Oppo Reno Realme 3 Pro Sony Xperia XZ3 Tecno Spark 3 Pro Vivo X27 Vivo Nex S Vivo Nex A Xiaomi Mi 9 Xiaomi Mi Mix 3 5G Google Pixel 3a Google Pixel 3a XL Google Pixel 3 Google Pixel 3 XL Google Pixel 2 Google Pixel 2 XL Google Pixel Google Pixel XL Back up your data While the final Android 10 build won't be as risky as getting involved in a beta program, it's still a really good idea to backup your Android devices regularly and before committing to the upgrade. Make sure to back up your Android phone to your PC to make sure your precious data is as safe as houses. How to install Android 10 So your phone has been confirmed to be getting the Android 10 update — hurrah! Now what? Well, you may have to wait a while. Some manufacturers take a little while to push the update out, whether it's the speedier companies like Nokia, or the slowpokes of Samsung and LG. That usually comes down to how much work they have to do, and creating manufacturer UIs like Samsung's upcoming One UI 2.0 can take a significant amount of time. Thankfully, when your update is ready, it'll be pushed through to your phone and you'll be prompted to upgrade. You can either upgrade right then and there, or you can choose to have your phone install it at a later time when it's more convenient — you can even have it update overnight. If you're really, really excited about it (like us) then you can manually check to see if the update has come in. To do so, head to Settings > System > Advanced > System update > Check for update. If you're not using a stock Android phone, then your path to finding the updates section may be slightly different — for instance on Samsung phones, you can access Software update directly from the Settings app — but its almost always somewhere in your Settings. That's really all there is to updating to Android 10. Unsure of what's new in the operating system? Check out our Android 10 review. Editors' Recommendations
